2. Exploration Logistics and Detailed Information

Will explosives be used for any activity/activities? If yes describe in detail which activities require the explosives, where they will be stored, and any other relevant information.

No

What commodity or commodities are being sought in the work program?

Au, Cu, Ag

How will you be transporting personnel to the exploration site for all activities? Describe in detail.

Access will be by ground using existing trails that lead to the property by pickup truck, preaut and ATV. Some trail construction/rehabilitation will be required to access the mineral showings and proposed drilling sites.

How will you be mobilizing/demobilizing equipment to and from the exploration site for all activities? Describe in detail.

Drill and drilling equipment will be transported on flat deck semi-trailers on all weather roads to drill trail heads. Equipment will be offloaded with a dozer and skidded onto the drill collars.

What type of equipment will you be using for all of the early exploration activities?

Pick-up truck, ATV/SXS, diamond drill and associated drilling equipment, preaut and dozer.

What type of drilling will take place? (e.g. core drilling, reverse circulation)
NQ core diamond drilling

Do you anticipate the removal of the drill casing?

☐ Yes ☒ No

If yes, when will you be removing it?

☐ Immediately ☐ 3 to 6 months ☐ 6 to 12 months ☐ 1 to 2 years

For the exploration activities you have selected in your early exploration submission please fill in the associated details (required for all activities proposed). *

☐ Yes ☒ No

Please provide any other information relevant to this project.

This round of early exploration drilling is greenfield in nature, drilling on recent compilation targets. Most areas have seen little to no previous drilling. Work areas have seen a combination of logging and previous early stage exploration in the past. The company has internal SAR monitoring equipment and training programs that will be used while working in the areas. Holes will be cemented from below casing to surface. New trails will be required for this project and will be routed in the most direct route, in the most immature vegetation growth possible. Drill trail widths will be constructed as narrow as possible to accommodate the maximum equipment in use. Drill pads will be constructed at the minimum dimensions to accommodate safe drilling practices. Fuel will be stored in double walled tanks. Bedrock cuttings will be contained in sumps at site and covered where possible.
