2.4.2.4.]---Silos and Grain Storage Bins[1]--)Where an enclosed tower silo, horizontal silo, or grain storage bin is connected to an adjacent feed room, mechanical exhaust ventilation shall be provided to remove air from the lowest floor level of the feed room to the outdoors at a rate not less than 3 air changes per hour.[2]--)The ventilation system of the farm building in which the feed room referred to in Sentence(1) is located shall be designed to prevent airflow from the feed room to any other part of the floor area of the farm building.

Definition of 'connected'

Grain storage bins are normally connected to a feed room with enclosed augers

Perhaps provisions should be made for feed rooms to be natural ventilated

Normally feed room doors are open when feed is being prepared
